

Thanks for joining the next-generation two-strap revolution!

Stoked to have you bringing the FASE System to riders.

Here's a simple way to showcase the System and its unique effortless entry.

After seven years of rider-driven development, the FASE Fast Entry System enhances the locked-in feel of traditional two-strap bindings, combined with an ultra-fast strapping-in process, while delivering unmatched high performance, all-day comfort, and a natural board feel. FASE is redefining the future of modern bindings and is compatible with all boots.

Advantages of the FASE system

See how it works

Compatible with all Boots and Boards

Effortless Fast Entry and Exit

Enhances Boot to Binding Connection

All-Terrain Performance

Lifetime Warranty

FASE System

AUTOBACK

The key to the revolutionary FASE Fast Entry System, the AutoBack, allows for hands-free entry into the binding. This intuitive design automatically closes as the boot enters the binding and opens when you lift your boot out. The AutoBack also folds flat for skating, chairlifts, and storage.

FASTSTRAP

An innovative long ankle ladder that remains connected for ultra-fast, one-handed strapping-in. With a classic ratchet design to fine tune ankle strap tension, the FastStrap complements the AutoBack's automatic closure system so riders can strap-in faster than ever before.

LOCKED-IN TOE STRAP

Simply set it and forget it. Designed to remain in position to complement the Fast Entry System. The LSR 2.0 buckle and unique tri-toothed ladder allow you to 'set it and forget it' or make easy on-the-fly fit adjustments.

FAQ

Why do different brands use the FASE Fast Entry System?

FASE is an ingredient brand, like BOA or Gore-Tex. Our Brand Partners (Bataleon, Jones, ThirtyTwo, Rome) seamlessly integrate our patented Fast Entry System into their own specific binding designs.

Who is the FASE Fast Entry System for, and where does it work best?

The FASE Fast Entry System is built for all riders, from first season beginners to seasoned pros, and it performs in every condition and any terrain, from peak to park, powder to piste. It even handles deep snow with no problem — just clear out excess snow before strapping in, like you would with your traditional two-strap.

Is the FASE Fast Entry System trusted by pro riders?

Yes! Pro riders like Scott Stevens, Jeremy Jones, Pat Fava, Ståle Sandbech, Victor de Le Rue, Tor Lundstrom, and Marissa Krawczak trust the FASE Fast Entry System to excel in their everyday riding and push the limits of performance on the mountain.

Is the FASE Fast Entry System durable?

Yes, it's built to withstand all terrain and conditions! The minimal mechanism has been rigorously tested for over seven years and is trusted by pro riders. Plus, the system comes with a lifetime* warranty.

Is the FASE Fast Entry System safe?

The FASE Fast Entry System is incredibly safe. It is as secure and safe as existing two-strap binding models and has undergone thousands of hours of on-snow testing and is backed by a lifetime warranty.

How much does it weigh?

The FASE Fast Entry System is designed to seamlessly integrate into our partner brand's bindings, making them comparable in weight to existing high-end two-strap bindings.

How do I get in?

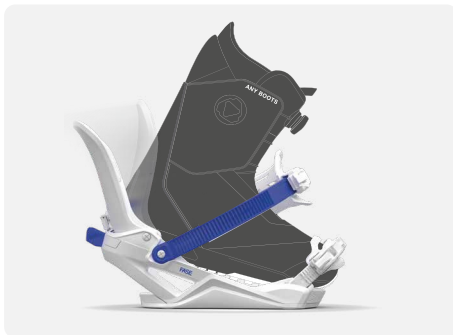

OPEN MODE

When the AutoBack is angled back and the FastStrap is wide open the binding is ready for entry.
Hint: Kick the AutoBack forward to fold it flat for loading chairlifts, skating or storage.

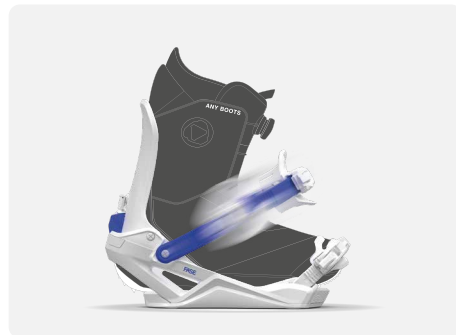

1.

Simply insert your boot into the binding and catch the toe strap.
(The AutoBack automatically closes around your boot while the Locked-In Toe Strap remains in place.)

2.

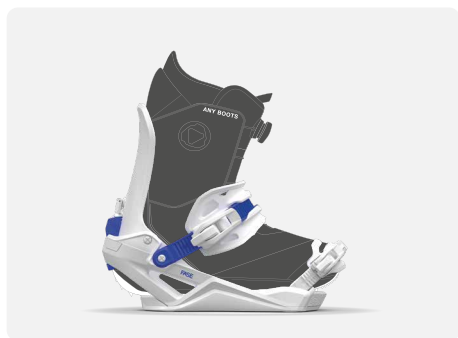

Buckle down only the FastStrap (ankle strap).
(Since the ankle ladder is already engaged, you only need one hand to complete!)

How do I get out?

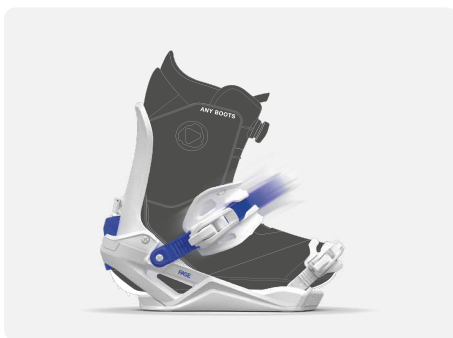

RIDE MODE

With the AutoBack closed around your boot, and the FastStrap securely buckled you're ready to charge in any terrain or snow condition.

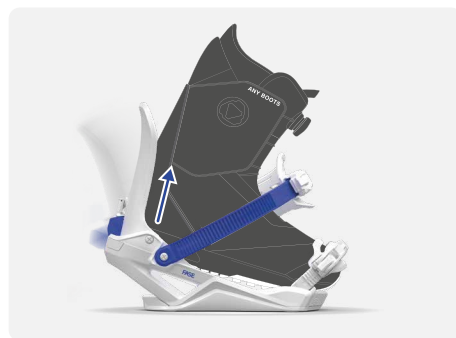

1.

Simply open the FastStrap (ankle strap) until it stops.

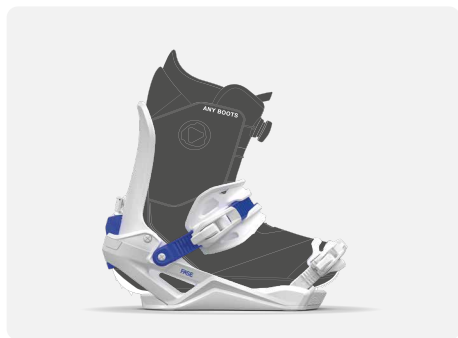

! 2.

Bend your knee slightly, **lift your heel**, and exit completely.
(The AutoBack opens automatically.)

First ride of the day

The Locked-In Toe Strap is made to stay in place. Adjust it once before your first ride to get the right tension, then leave it as is.

Lifts and storage

Kick the AutoBack forward to fold it flat for loading chairlifts, skating or storage.

Jones + Thirtytwo

Adjust the toe strap position.

The external toe ladder has two settings depending on your boot size. Push the ladder down towards the board to disengage. Move the ladder to the more upright or forward position to match your boot size. Pull the ladder back up away from the board to lock it into place.
